

# Crypto trading technologies that are unavailable on the crypto market!

CryptoCopy is more than just a signaling service  
or a copy trading platform. It is a completely  
new solution!

Reliability, Diversification, Quality!

# PRODUCTS

01\_  
COPYING

02\_  
TERMINAL

# Copying\_

CryptoCopy allows for quick and efficient copying of trades between exchanges.

Possibilities include intra-exchange copying between Futures, Spot and Copy Trading sections within one exchange, or cross-exchange copying between multiple exchanges

# COPYING EXAMPLES

# Copying between different sections of the same exchange.

# Copying between the copy trading sections and your accounts\_

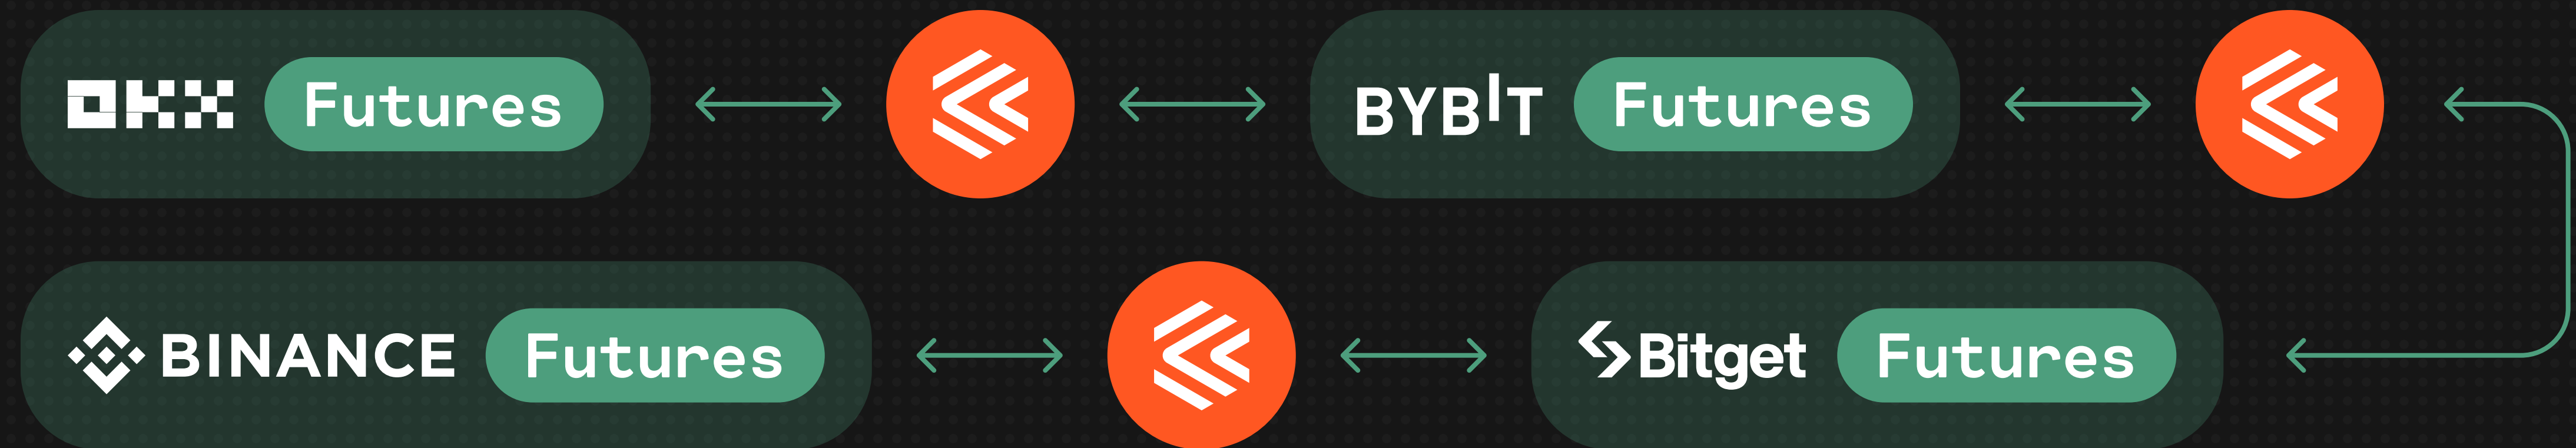

# Copying between accounts of the same section within the same exchange.

# Cross-exchange copying between exchanges within the same section.

# Cross-exchange copying between copy trading sections of multiple exchanges

# Trading via MT4 on the exchanges\_

Over 800 route options  
to copy your trades  
on over 20 exchanges.

# Terminal

Trade on all leading cryptocurrency exchanges via MetaTrader 4 with Bridges from CryptoCopy.

MetaTrader 4 is the preferred choice of millions of traders with varying needs for trading on the market.

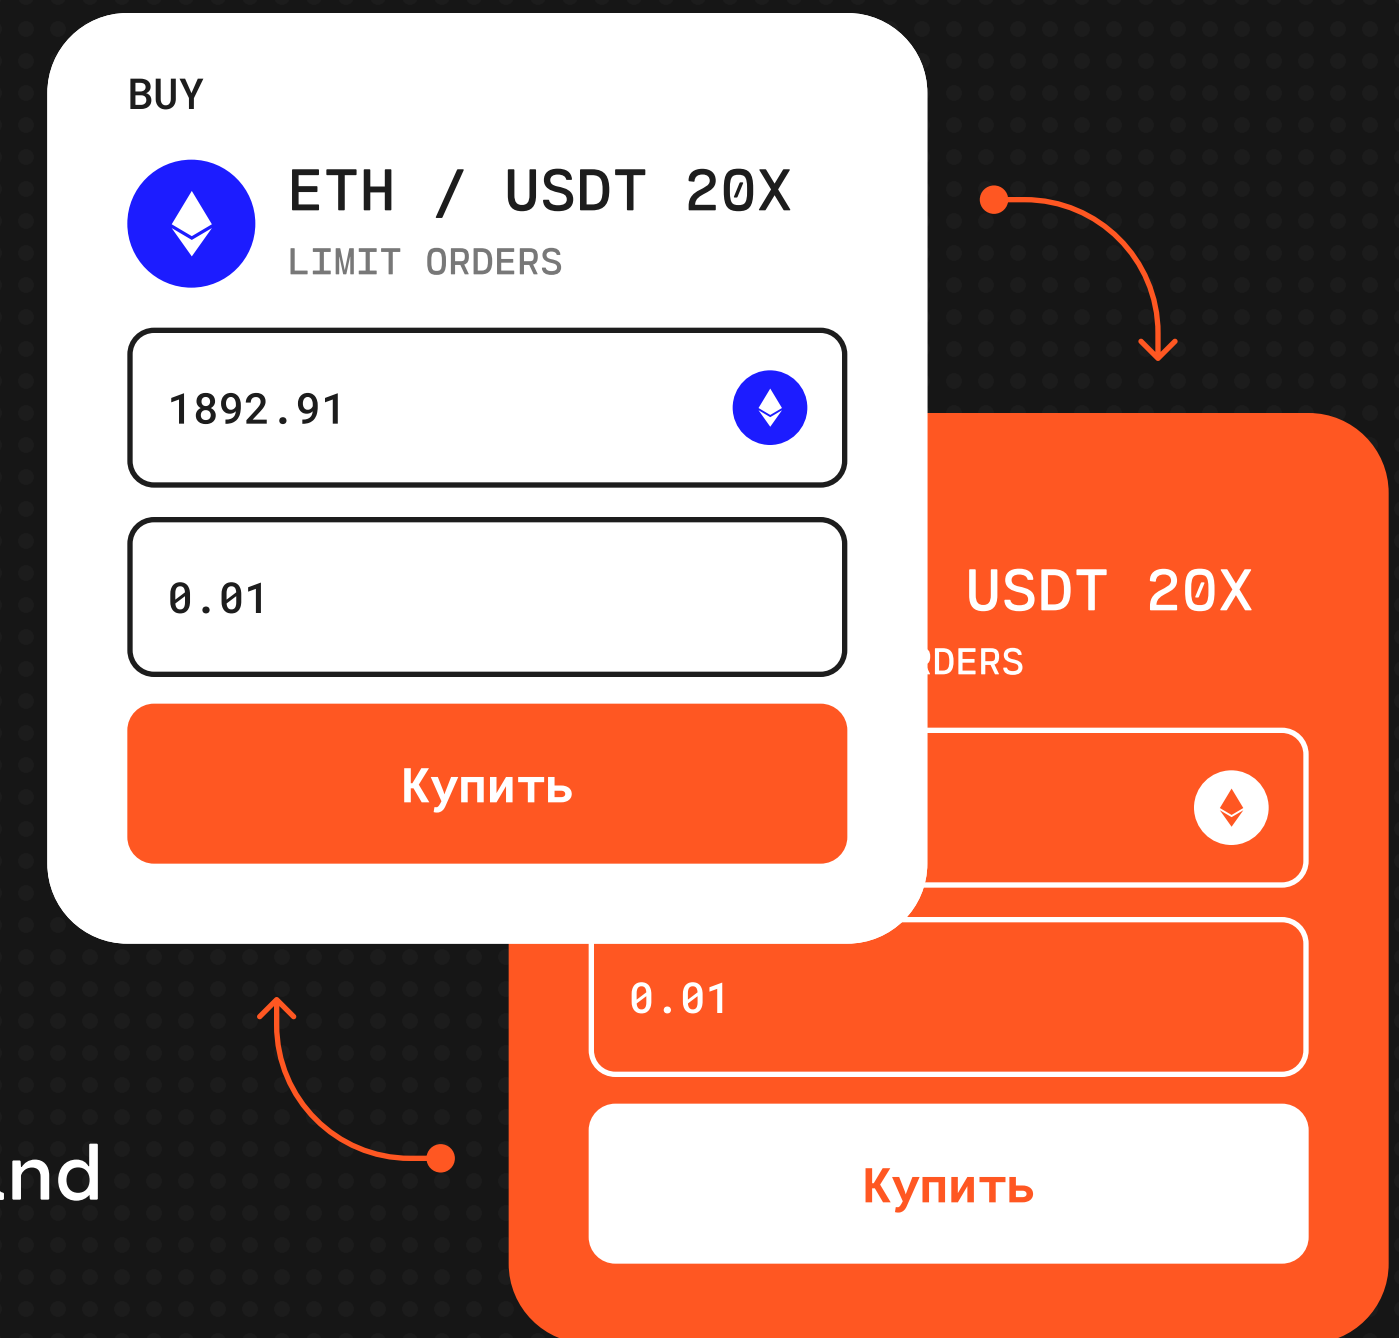

# THE PROBLEMS, THAT CRYPTOCOPY SOLVES

01

It is not possible to copy trades between various sections within the same exchange.

02

Copying trades to multiple exchanges and accounts is currently unavailable, despite being in high demand by both professional and casual traders.

**CryptoCopy provides a solution to this problem.**

With CryptoCopy, you can easily copy your personal trades, trades of algorithms or services to an unlimited number of exchanges and accounts, as well as any trading section.

03

The Exchange's web terminal falls short of providing professional-grade trading and market analysis, causing issues for users and failing to meet their needs.

A background candlestick chart with grey bars and white outlines, showing price fluctuations over time. The chart is positioned horizontally across the middle of the slide.

**CryptoCopy's solution** to integrate MetaTrader 4 for all popular exchanges solves this problem.

# 04

Centralized exchanges do their best to protect their users, but no one is immune to risks such as hacking and other factors. Decentralized exchanges (DEX) are also not a one-size-fits-all solution and have their own drawbacks.

Hack

10.2022 - Binance

Lost assets:  
\$570 million

Hack
